

### Task 1

You are given a space separated list of numbers.

Your task is to print a reversed Numpy array with the element type float.

#### Input Format

A single line of input containing space separated numbers.

#### Output Format

Print the reverse *NumPy* array with type float.

#### Sample Input

```
1 2 3 4 -8 -10
```

#### Sample Output

```
[-10. -8.  4.  3.  2.  1.]
```

### Task 2

You are given a space separated list of nine integers. Your task is to convert this list into 3x3 numpy array.

#### Input Format

A single line of input containing space separated integers.

#### Output Format

Print the 3x3 *numpy* array.

#### Sample Input

```
1 2 3 4 5 6 7 8 9
```

#### Sample Output

```
[[1 2 3]
```

```
 [4 5 6]
```

```
 [7 8 9]]
```

### Task 3

Your task is to print an array of size  $N \times M$  with its main diagonal elements as 1's and 0's everywhere else.

#### Input Format

A single line containing the space separated values of  $N$  and  $M$ .

$N$  denotes the rows.

$M$  denotes the columns.

#### Output Format

Print the desired  $N \times M$  array.

#### Sample Input

3 3

#### Sample Output

```
[[ 1.  0.  0.]  
 [ 0.  1.  0.]  
 [ 0.  0.  1.]]
```

### Task 4

You are given two integer arrays,  $A$  and  $B$  of dimensions  $N \times M$ .

Your task is to perform the following operations:

1. Add ( $A + B$ )
2. Subtract ( $A - B$ )
3. Multiply ( $A * B$ )
4. Integer Division ( $A // B$ )
5. Mod ( $A \% B$ )
6. Power ( $A ** B$ )

### Input Format

The first line contains two space separated integers, N and M.

The next N lines contains M space separated integers of array A.

The following N lines contains M space separated integers of array B.

### Output Format

Print the result of each operation in the given order under **Task**.

#### Sample Input

```
1 4
1 2 3 4
5 6 7 8
```

#### Sample Output

```
[[ 6  8 10 12]]
[[-4 -4 -4 -4]]
[[ 5 12 21 32]]
[[0 0 0 0]]
[[1 2 3 4]]
[[ 1 64 2187 65536]]
```

### Task 5

You are given a NxM integer array matrix with space separated elements (N = rows and M = columns).

Your task is to print the *transpose* and *flatten* results.

### Input Format

The first line contains the space separated values of N and M.

The next N lines contains the space separated elements of M columns.

### Output Format

First, print the *transpose* array and then print the *flatten*.

#### Sample Input

```
2 2  
1 2  
3 4
```

#### Sample Output

```
[[1 3]  
 [2 4]]  
[1 2 3 4]
```
